UNIQUE

Devised to aid the creators of singular solutions within the shower area, offering new possibilities to the world of design

Private Area

Example: a detailed section showing the private area of a single-family home, consisting of a bedroom, a dressing room and a bathroom. The shower area has been designed as an annex to the dressing room, with extra-large dimensions and twin entry zones

Example: a detailed look at a dual function shower tray, complete with entry zones and a mix of transparency and opacity with the adjacent dressing room etc.

The Unique series has been developed to offer solutions, on an individualized basis, to each shower area.

We find the freedom to define the form of a given area alongside the ability to call upon different drainage types and positions. The concept allows for the best possible aesthetic and functional results to be brought together, with the aim of being able to offer the customer the most satisfactory shower experience available.

Unique is a solution for the shower area designer, backed up by product specialists, which allows for a maximum level of individualization to be achieved.

UNIQUE

the shower
SHOWER TRAYS

A general view of the property's private area, as seen from the bathroom. In the background, the bedroom and the dressing room can be seen in the centre, adjacent to the shower area.

UNIQUE

the shower
SHOWER TRAYS

A detailed look at the shower tray as a finished article, as designed by the client, complete with the transparency created between the shower area and the dressing room.

UNIQUE

the shower
SHOWER TRAYS

A side view, as seen from the corridor, of the large format 130 cm wide 400 cm long white, Scene shower tray. A border mounted drainage has been selected, along with grooves placed by the entry zone.

UNIQUE

the shower
SHOWER TRAYS

Example: A 90x165 cm Shower tray, complete with drainage in its border, according to the specifications as provided by the client.

Example: A 100x325 cm Shower tray, composed of two matching units, complete with drainage located in the border and a grooved area, according to the specifications as provided by the client.

UNIQUE

the shower
SHOWER TRAYS

Example: A 90x120 cm Shower tray, complete with a wall-mounted drainage, according to the specifications as provided by the client.

Example: A 130x180 cm Shower tray, complete with twin border-mounted drainage, according to the specifications as provided by the client.

WALL DRAINS

A shower tray devised for a wall inlet channel drainage. Once the exterior form of the shower tray has been designed, the length and the positioning of the drainage, around the perimeter, are established. The diagram below indicates the distances that must be observed in relation to the position of the inlet channel and the corners of the shower tray.

BORDER-MOUNTED DRAINAGE

A shower tray devised for a border-mounted drainage. Once the exterior form of the shower tray has been designed the position of the drainage(s), around the perimeter, is established. The diagram below indicates the distances that must be observed in relation to the position of the drainage and the corners of the shower tray.

INTERIOR DRAINAGE

A shower tray devised for drainage positioned in its interior. Once the exterior form of the shower tray has been designed the drainage type and its position within the interior of the shower tray are established. The diagrams as follow indicate the areas where the drainage(s) may be positioned, according to the dimensions of the shower tray.

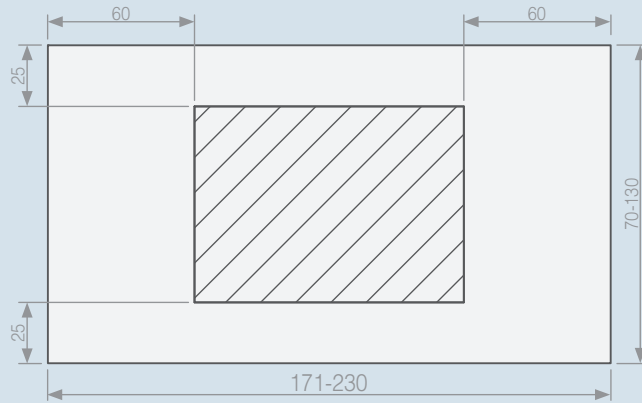

Rectangular drain cover, same material and finish as shower tray

Round stainless-steel drain cover

Square stainless-steel drain cover

 Area where drainage may be positioned in interior of shower tray

A SOLUTION FOR EXTRA-LARGE FORMATS

In order to achieve a solution regarding shower trays measuring more than 230 cm and up to 400 cm in length, an area based on the assembly of two units may be designed. The two units, up to 200 cm in length, are supplied independently of one another, however, their design is closely coordinated to guarantee a correct assembly at their final location.

Example: Requirements for an extra-large 100x325 cm solution

Inferior assembly joints in unit 1 and upper assembly joints in unit 2 determine the sequence in which the units are to be installed

The join between the two units may be visible, joined using generic materials or dissimulated through the use of the same material as the shower tray.

SELECT

SELECT, various formats and colours, smooth texture finish

SELECT

the shower
SHOWER TRAYS

The Select series offers a wide range of interior forms to design a shower tray.

The series is destined to enable shower area designers to be able to configure a solution that is both singular and adequate to their needs. The designer, once the exterior form of the shower tray has been determined, then moves on to selecting the interior, its position and its orientation from the predetermined form or forms available.

Select is an aid to the designer, allowing for the freedom to find solutions when faced with complex forms.

Scene

An advanced composition of mineral compounds, organic polymers and specific additives which are designed to be moulded. It is also known as synthetic stone and is included in a group of «solid surface» materials - skinless synthetic materials whose outermost surfaces have the same properties as their interiors. The synthetic resin component in its structure gives it a certain amount of elasticity, while the mineral compounds act as a kind of shield that provide resistance to wear and tear, and also give it anti-slip qualities.

High rigidity

Pleasant to the touch

Anti-slip

Antibacterial

Highly resistant to moisture

Highly resistant to chemical agents

SMOOTH TEXTURE

marmek

A compact composition made from resins and minerals derived from marble, which bestow it a high level of hardness combined with excellent characteristics for its use within the bathroom. The surface finish offers infinite possibilities in terms of personalization and presents an excellent resistance to both cleaning and regular hygiene products. The material itself has high antibacterial qualities and is extremely suitable for the manufacturing of shower trays, due to its non slip nature.

Colours and textures

STANDARD COLOURS

SPECIAL COLOURS

RAL / NCS

Colors are delivered in matte finish. Shiny or metallic finishes can not be accepted because they affect the characteristics of the product. If in doubt, please contact our customer service.

SMOOTH TEXTURE
SLATE TEXTURE

gelcoat

Gelcoat is a compact composite of resin and varied mineral content, which features an external layer of the highest quality ISO NPG Gelcoat, providing the material with both a high level of hardness and excellent characteristics for its use within the bathroom. The surface finish is available in different colours and textures and also offers an excellent resistance to cleaning and everyday cleaning and hygiene products, guaranteeing an excellent level of durability.
